ABSTRACT

This paper explores a national requirement which is mandatory to enhance the economic situation of the country after post-conflict period. The aim of the research is to understand how to optimise foreign revenue through deploying aviation contingents of SLAF in UN missions. Underutilized aviation assets could turn to make lucrative profit making projects while flourishing the lives of military personnel in this very Island. The study further aimed to understand the possibility of uplifting the deployed assets to generate more profit. Researcher assumed that the country would be benefited with the recruitment of youngsters to the technical trades of SLAF and further it would enable them to find more job opportunities even when they step outside from SLAF. It would create more room flowing foreign revenue to the country. Researcher went through a thorough study and understood that the country is in a positive and possible stance to generate more revenue through implementing new suggestions and developing existing infrastructure with regard to aviation contingents. Further the UN organization is with new vacancies to induct more aviation contingents in mission areas. Sri Lanka is in a good position to consider for further missions after winning majority support in missions, where aviation contingents are being deployed at present. As per the initial assumption the younger generation would get more opportunities to join with SLAF in professional branches and trades where they can grab maximum advantage to join and start professional career prior joining with their next professions. Sri Lankan government could be able to generate good foreign revenue through deploying SLAF aviation contingents if timely decisions are made to acquire those missions.
