

RESTRICTED

ABSTRACT

Beyond the traditional ways of learning and with the new trends of information technology most of learners become to learn through internet. And also most of learning programs have begun to conduct lecturing and educating through online. But still e-learning process is new for Sri Lankan students as well as programmers since it is still in developing and promoting stage. However, the online learning has incurred for the military in many countries the Sri Lanka Air Force is not given much concern about e-learning, and its implementation. Hence, this study was mainly focus to check the effectiveness of implementation on e-learning process to the SLAF and to study the future trends of e-learning which would be benefitted to enhance the effectiveness of education system in SLAF. The researcher was selected few factors influencing application of e-learning to increase the trend to follow higher education of SLAF officers. After the responses of SLAF officers through a questionnaire analysis was done by using SPSS and done bivariate analysis to test the hypothesis. With the findings of the analysis it was observed that officers expect to follow e-learning only for their future expectations. Further, the future trends on e-learning going with parallel to the job requirement of SLAF officers and all the e-learning implementations should be focused on the selected factor.
